

Recommend it once. Get paid every month.

Daniks.AI is an Amazon Ads autopilot — including **KDP and book campaigns**. The author or seller sets a target ACoS; the AI runs campaigns, bids, keyword harvesting and negatives 24/7. You send people to a free 14-day test, and **you keep 25% of every payment they ever make**.

25% Of every payment, for life	60 days Cookie window	\$0 Minimum payout threshold	14 days Free for your audience
--	---------------------------------	--	--

The terms, in full

- ✓ **25% of every invoice, recurring.** Not a first-month bounty — as long as the customer you referred keeps paying, you keep earning.
- ✓ **60-day cookie, \$0 payout threshold.** Withdraw whatever has accrued, whenever you like; real-time dashboard for clicks, trials and revenue.
- ✓ **Your own link and coupon.** Issued at sign-up; works on every plan from \$99/month up to the \$999 agency tier.
- ✓ **Done-for-you material.** Swipe copy (below), banners, product screenshots and demo footage on request — tell us the format and we'll cut it for you.
- ✓ **No exclusivity, no quota.** Recommend us next to the rest of your stack; we only ask that claims match what the tool does.

What the maths looks like

Referred customer	You earn	Per year
Small seller · \$99/mo	\$24.75/mo	≈ \$297
Growing seller · \$179/mo	\$44.75/mo	≈ \$537
Larger brand · \$299/mo	\$74.75/mo	≈ \$897
Agency plan · \$999/mo	\$249.75/mo	≈ \$2,997

Subscriptions here are sticky — customers stay for years, because the account keeps running on the automation. **One of our partners referred four agency-tier accounts and now collects roughly \$1,000 every month** from that single batch of referrals.

That is the whole reason we pay a share instead of a one-off fee: if the people you send us do well, you get paid for as long as they stay.

Swipe copy — use as is, or make it yours Replace [LINK] with your partner link.

NEWSLETTER / EMAIL	VIDEO / PODCAST MENTION	SOCIAL POST
Most ad accounts are not short of budget — they are short of someone watching the search terms. Daniks.AI does that part: you set the ACoS you can live with, and the AI handles bids, keywords and negatives daily, KDP campaigns included. It is free for 14 days and you keep your existing campaigns running while you compare. If it works for you, it costs from \$99/month: [LINK]	“If you are running ads and you are not opening the search-term report every week, something is quietly eating your margin. The tool I use for that is Daniks.AI — you give it a target ACoS and it manages the bids and negatives for you, books included. Link in the description — the first two weeks are free, and you do not have to switch off the campaigns you already have.”	Amazon Ads on autopilot: you set the target ACoS, the AI does bids, keywords and negatives daily. Works for KDP titles too. One publisher's account: 46% ACoS → 21%, sales roughly doubled. 14 days free, existing campaigns stay untouched → [LINK]

WHY PEOPLE CONVERT ON THE FREE TEST

Nothing has to be switched off. We leave existing campaigns running and launch ours in parallel, so the comparison happens on the same catalogue — and setup is a standard Amazon Ads API authorisation, about ten minutes, revocable at any time.

Recent result: a publishing client went from **46% ACoS to 21%** while sales roughly **doubled**.
